

Compliance

Use the Compliance Tab in OneView to monitor your driver's compliance and unidentified driving records.

The screenshot shows the OneView Compliance dashboard. At the top, there are tabs for Dashboards, Compliance (which is highlighted with an orange box), Jobs, Maintenance, Forms, and Reports. Below the tabs are filters for Assets and a date range set to 'Last 30 Days (21-Jun-22)'. A 'Transfer ELD Data' button is also present.

The main area displays several key metrics:

- Compliant Logs:** A pie chart showing 52.7% green and 47.3% red.
- Uncertified Days:** 220
- HOS Violations:** 17
- Form & Manner Violations:** 14
- DVIR Violations:** 18
- Unidentified Driving Records:**
 - Open:** 3
 - Pending:** 0
 - Annotated:** 1

Below these metrics is a table titled 'Region Compliance' with columns for Region, % Compliant Logs, Uncertified Days, HOS Violations, Form & Manner Violations, DVIR Violations, Open UDR, Pending UDR, and Annotated UDR. The data shows:

Region	% Compliant Logs	Uncertified Days	HOS Violations	Form & Manner Violations	DVIR Violations	Open UDR	Pending UDR	Annotated UDR
Assets	100%	0	0	0	0	3	0	1
FM.on.Pump	100%	0	0	0	0	0	0	0
Tanks	100%	0	0	0	0	0	0	0
Users	54%	199	17	12	16	0	0	0

Compliance Filters

Duration

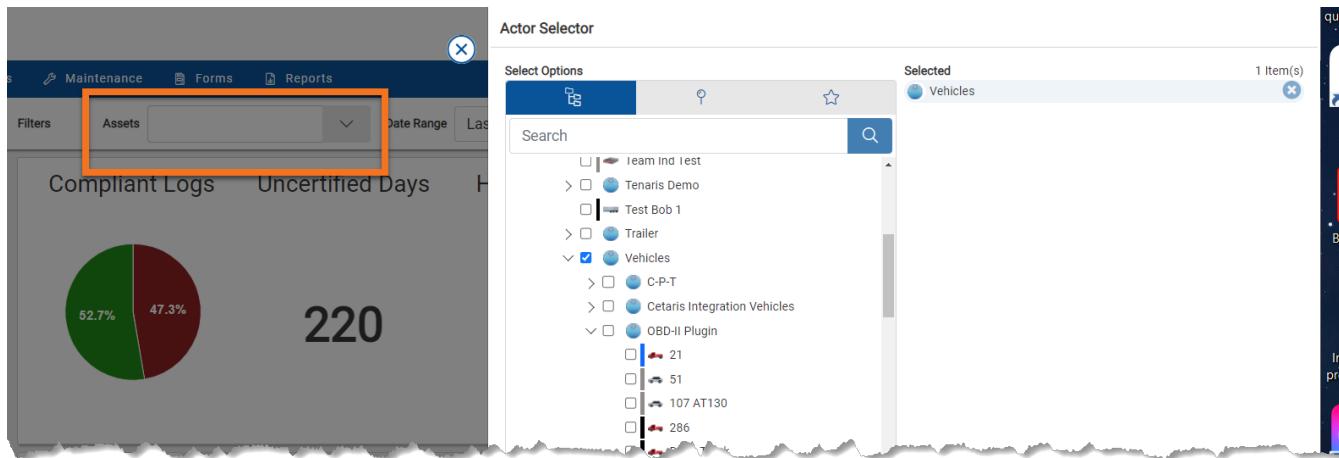

Use the Duration dropdown to choose a timeframe for your records. The Last 7 Days is what will be on the driver's tablet and keep in mind that there may be more records that are older than the duration you have chosen.

The screenshot shows the OneView Compliance dashboard with a focus on the 'Date Range' filter. An orange arrow points to the calendar icon next to the date range input field, which is set to 'Last 30 Days (21-Jun-22)'. To the right of the date range is a detailed calendar view for June and July 2022, showing the current date as June 21, 2022. To the far right is a 'Time Range' section with a dropdown set to 'Ending Nov' and a 'Duration' dropdown set to 'day'.

The main dashboard area displays the same metrics as the previous screenshot, including the pie chart for Compliant Logs (52.7% green, 47.3% red) and the count of 220 Uncertified Days.

Assets

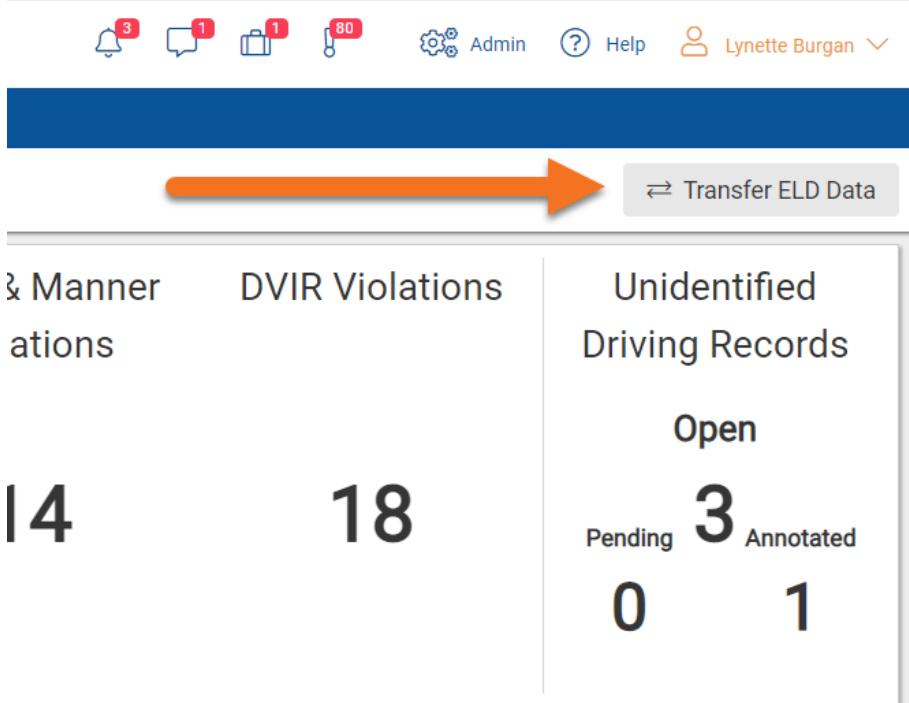

Use the Assets wrench to filter your drivers and assets. By default, every user that is a driver will be included and every asset that is ELD will be included in the compliance modules. Use the filter if you need to narrow your results.

The screenshot shows the OneView™ Compliance dashboard. At the top, there's a navigation bar with 'Maintenance', 'Forms', 'Reports', 'Filters', and an 'Assets' dropdown. Below the navigation is a pie chart showing 52.7% and 47.3%, and a large number '220'. To the right is an 'Actor Selector' dialog titled 'Select Options'. It has a search bar and a tree view. Under 'Selected' is 'Vehicles'. The tree view includes categories like 'team ind test', 'Tenaris Demo', 'Test Bob 1', 'Trailer', and 'Vehicles', with several sub-items under 'Vehicles'.

Transfer ELD Data

Use the Transfer ELD Data button to transfer driver's RODS through the Federal Database.

The screenshot shows the OneView™ Compliance dashboard with a blue header bar. Below it is a dark blue bar with three icons: a bell (3), a message (1), and a briefcase (80). To the right are 'Admin', 'Help', and a user profile for 'Lynette Burgan'. A large orange arrow points to a grey button labeled 'Transfer ELD Data'. Below the header are four cards: 'Manner Violations' (14), 'DVIR Violations' (18), 'Unidentified Driving Records' (Open: 0, Pending: 3, Annotated: 1), and another card partially visible.

Transfer Type: Choose Web Services (most common) or Email. You don't have to add anything here, Pedigree's server is already set up to transfer to the Federal Database's server, including if you choose email.

Driver: Choose your driver. RODS can only be sent one driver at a time. If you need to send multiple drivers, repeat this process for each individual driver.

Record Timeframe: choose how much many days, weeks, or months of records to include in the transfer.

Output File Comment: Add the auditor/officer's digital ID in this field. They will give you the information to add here.

Transfer: tap this button to make the transfer.

Compliance %

The Compliance % pie chart is interactive. Hover over the green or red areas to see your percentage of compliant logs for the duration time period.

Note: Compliance percentage is calculated by taking the number of driver log days in the duration selected that have at least one issue and dividing that number by the total number of log days for that time period.

Example: In last 7 days, a Driver has 7 log days. They have 8 different violations, 3 on Wednesday, and 5 on Friday. That means they have 2 log days in the last 7 that have compliance issues. $2 \div 7 = 28\%$ Non-compliant (red) or 72% compliant (green)

Driver Compliance Tab

The driver compliance module shows your individual driver compliance numbers and percentages. Each of the column heads are clickable to sort. Each of the driver red line graphs are also clickable to see the actual dates of the logs with issues.

Region Compliance	Driver Compliance		Use the icon to download the results of any tab
Driver	Region	% Compliant	
AmeriCall Driver	Demo Shipping Services, LLC > Users > Drivers	100%

Violation Shading

Hours of Service violations show pink shading on the driver's log graph, on the date block and are outlined in red on the monthly calendar. This violation shading is optional and can be turned off in a user's settings.

The violation event appears in the log table below the graph, also with pink shading. The events are clickable to reveal the violation event window where notes can be recorded. Any notes recorded here will also appear in the driver's HOS Violations list (see above).

Date & Time	Event Type	Location	Vehicle	Odometer (mi.)	Engine Hours	Trailer #	Ship #

Form & Manner Violations

When a driver is missing a shipping document number on a driving record or a location on an On Duty or Driving record, this will trigger a Form & Manner violation in OneView. Click on the line graph on any individual driver's results to see a list of the log dates and violations in an exportable list.

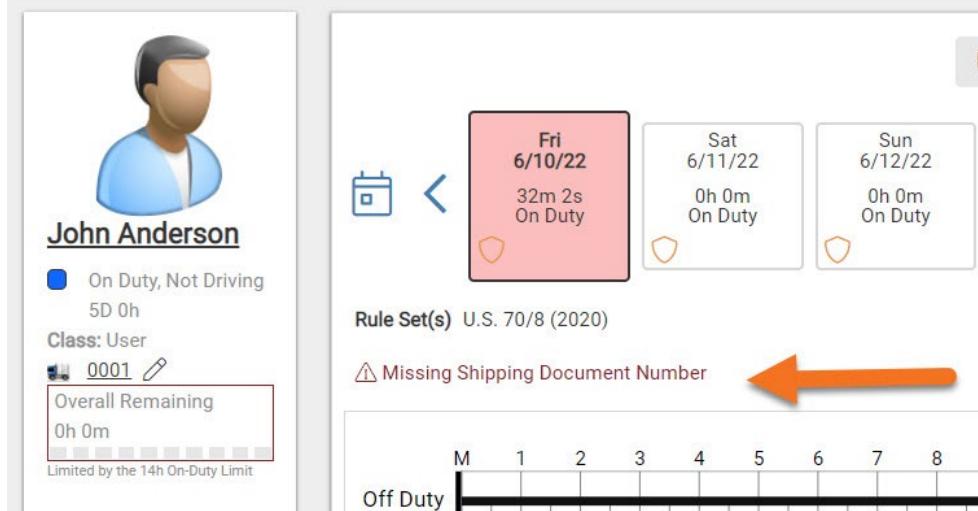

Use the export icon to export this entire list of this driver's Form & Manner violations to a csv (spreadsheet)

Form & Manner Violations for Demo Shipping Services, LLC > John Anderson	
Date	Violation
Fri 10-Jun-22	Missing Shipping Document Number
Fri 10-Jun-22	Missing Location

Violation Shading

Any days that have a Form & Manner violation will have pink shading in the date block.

The log table will shade missing document numbers on any driving statuses, as well as the missing locations on any On Duty and Driving statuses.

Date & Time	Event Type	Location	Vehicle	Odometer (mi.)	Engine Hours	Trailer	Shipping #	Notes	Origin	Edits

DVIR Violations

When a driver misses an inspection window for a pre-trip or post-trip inspection, you will see a DVIR violation in OneView. You will first add a required Pre-Trip or required Post-Trip option for your driver(s) before this feature will trigger the missing inspections. Missing Inspections will only trigger on your selected requirements.

- Required Pre-trip Inspection
- Required Post-trip Inspection

Click on the line graph to see a list of DVIR violations for any driver.

All of the missing inspections or missing inspection reviews for the selected duration will show on an interactive list. Use the export icon to export this entire list of this driver's DVIR violations to a csv (spreadsheet)

Inspection Window

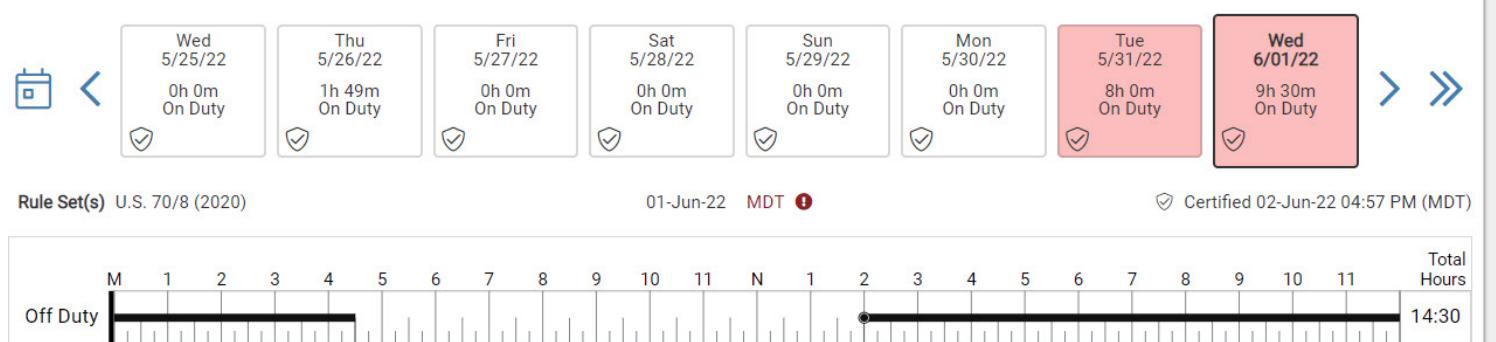

- A pre-inspection violation occurs if a vehicle/trailer is driven without doing an inspection after 8 hours or more off duty (or sleeper berth) OR if a driver changes vehicle/trailer and drives without doing an inspection.
- A post-inspection violation occurs if a driver goes off duty/sleeper berth after driving a vehicle/trailer without doing an inspection OR if a driver changes vehicle/trailer without doing an inspection on his last vehicle/trailer first.
- A Missing Inspection Review occurs if the tractor or trailer that has a defect on its last inspection is driven without a review result - marked as either defects corrected or above defects need not be corrected for safe operation.

You will see the window of when that tractor or trailer should have had the appropriate inspection.

Unidentified Driving Records

Unidentified Driving Records are created when a tractor is operated without a driver logged in successfully. These records download directly to a driver's tablet as an ELD reconnects to the tractor. At that time the driver can manage the records on the tablet by accepting them, ignoring the day, or choosing to back out of the unidentified records window. At that time, the records cue to the cloud and are then also displayed in OneView.

Choose the Compliance tab, then Unidentified Record tab beneath the main graphic.

Vehicles, LLC > Assets > Vehicles > OBD-II Plugin	14	0	0	0
Vehicles, LLC > Assets > Vehicles > OBD-II Plugin	10	0	0	38
Vehicles, LLC > Assets > CA Tractors	0	0	0	46
Vehicles, LLC	0	0	0	72

Vehicle: The asset name. Click the asset name to open the asset pages in this window, use the arrow to open the asset pages in a new tab.

Region: Which folder this asset is located in.

Open UDR: The number of unidentified driving records that are waiting for action.

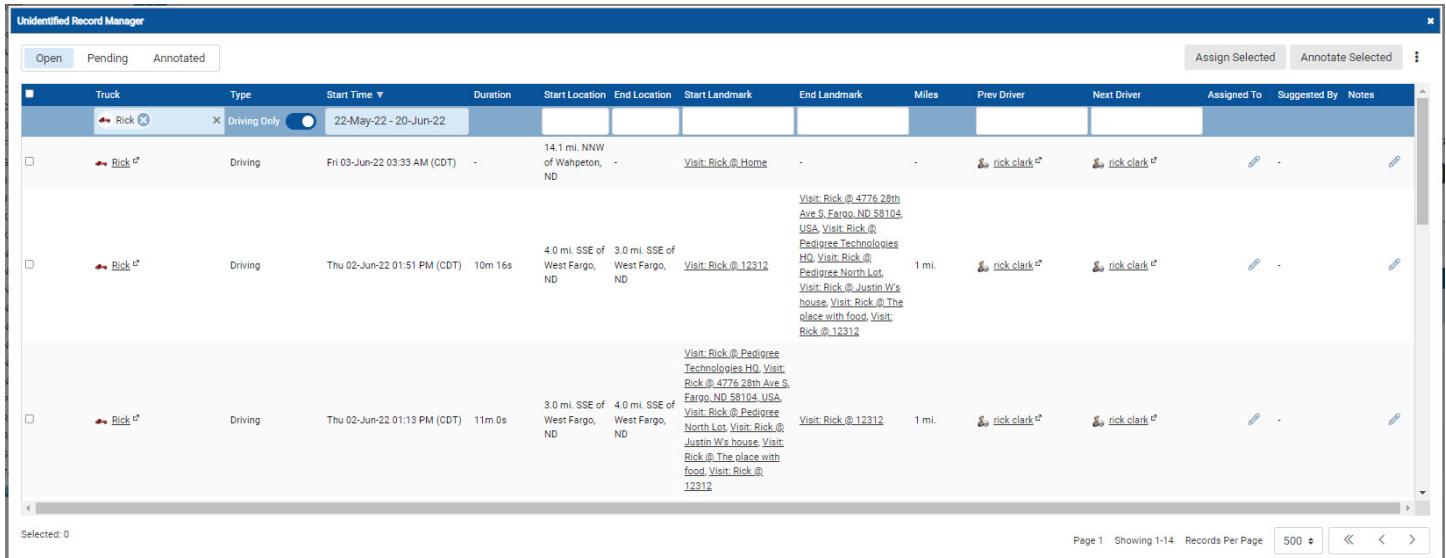

Pending UDR: The number of unidentified driving records that have been assigned to drivers but not yet accepted by them.

Annotated UDR: The number of unidentified driving records that have notes or annotations on them and may not need to be assigned, such as yard moves.

Unsynced Driving Records: The number of unidentified driving records on the asset's CalAmp device that have not yet downloaded to any driver's tablet.

Viewing Unidentified Driving Records

By clicking on the number of Open UDR, or Pending UDR, or Annotated UDR, a window appears that allows you to view the records, assign them to a driver, or make notes on them.

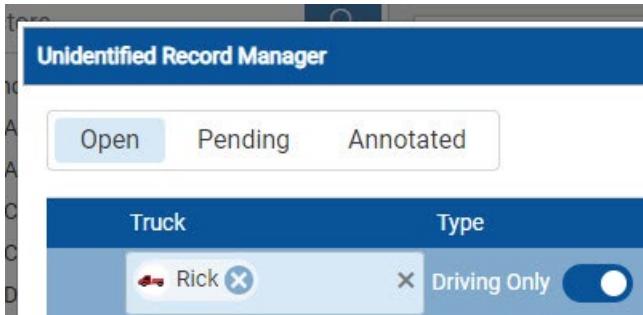

The screenshot shows a table of unidentified driving records. The columns include: Truck (Rick), Type (Driving Only), Start Time (e.g., 22-May-22 - 20-Jun-22), Duration, Start Location (e.g., 14.1 mi. NNW of Wahpeton, ND), End Location, Start Landmark, End Landmark, Miles, Prev Driver, Next Driver, Assigned To, Suggested By, and Notes. The notes column contains detailed logs of the trip, such as visits to Pedigree Technologies HQ, Justin's house, and a place with food. Buttons at the top allow switching between Open, Pending, and Annotated status, and there are buttons for Assign Selected and Annotate Selected.

Sorting Unidentified Driving Records

There are multiple ways to sort through the unidentified records for any vehicle.

Sort by Record Status

The top of the window includes three buttons – Open, Pending and Annotated. You will default to the list that you clicked on from the previous page, but you can switch between the different record states with these buttons.

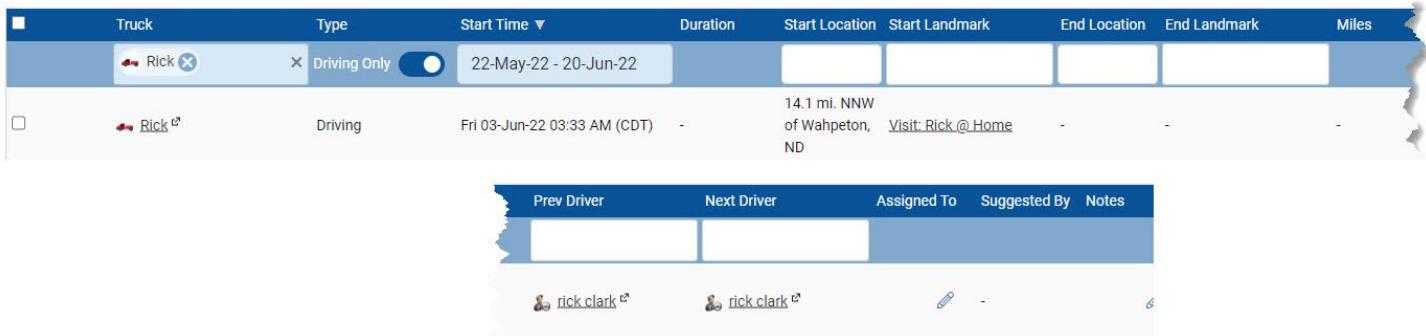

This screenshot shows the top portion of the Unidentified Record Manager interface. It features a blue header bar with the title 'Unidentified Record Manager'. Below it is a navigation bar with three tabs: 'Open' (which is selected and highlighted in blue), 'Pending', and 'Annotated'. A search bar is positioned above the main table area.

Sort with Filter Options

The top filter allows you to sort through pages of records by either clicking on the column heads to sort alpha-numerically, or enter specific information into any of the available

fields.

The screenshot shows a table with the following columns: Truck, Type, Start Time ▾, Duration, Start Location, Start Landmark, End Location, End Landmark, Miles. A filter bar at the top shows 'Truck' set to 'Rick', 'Type' set to 'Driving Only', and a date range from '22-May-22' to '20-Jun-22'. Below the table, a row for Rick shows 'Driving' as the type, a start time of 'Fri 03-Jun-22 03:33 AM (CDT)', and a duration of '14.1 mi. NNW of Wahpeton, ND'. The 'Start Landmark' is listed as 'Visit: Rick @ Home'. At the bottom, there are buttons for 'Prev Driver' (rick.clark), 'Next Driver' (rick.clark), 'Assigned To', 'Suggested By', and 'Notes'.

Truck: Choose additional trucks to view with this field.

Type: The Driving records is the default for this field, showing just instances of when the vehicle was in motion, but the toggle will allow you to see other types of records, like ignition events.

Start Time: When each of the records started, use the calendar to pick specific dates.

Duration: This is how long each record occurred.

Start Location: Shows where the record started.

Start Landmark: If the start location is a landmark, this will show which landmark.

End Location: Shows where the record ended.

End Landmark: If the record ended in a landmark, this will show which landmark.

Miles: The distance traveled for each record.

Prev Driver: If the system knows which driver was driving this vehicle before the unidentified record, it will show that driver's name and link to their logbook.

Next Driver: If the system knows which driver drove this vehicle after the unidentified record, it will show that driver's name and link to their logbook.

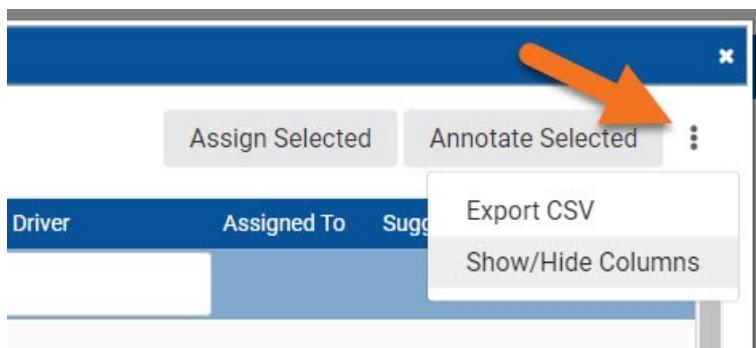

Assigned To: If this is a pending record, you will see who this record is assigned to. If it is not assigned, you can use the edit pencil to assign this record to a driver and move this record to the pending list.

Suggested by: If the record is assigned, the user that made the assignment will be listed here.

Notes: If this record is annotated, you will see the note here, or you can use the edit pencil to add a note and move this record to the annotated list.

Organize Filter Columns

If you would like to rearrange the columns or exclude some columns from the filter, use the Show/Hide Columns feature by clicking the ellipsis menu at the top right.

The screenshot shows a table with columns: Driver, Assigned To, Sugg. An orange arrow points to the ellipsis menu icon in the top right corner of the table header. A dropdown menu is open, showing options: Assign Selected, Annotate Selected, Export CSV, and Show/Hide Columns.

Uncheck any columns you wish to exclude, or drag and drop any of the column options into whatever order you want. Use the reset button to go back to the default order and re-add excluded columns.

Export CSV

Use the ellipsis menu at the top right to reveal the Export to CSV option. If you've filtered the list, only your results will be exported. If you have not filtered the list, all results, which could be multiple pages, will be exported.

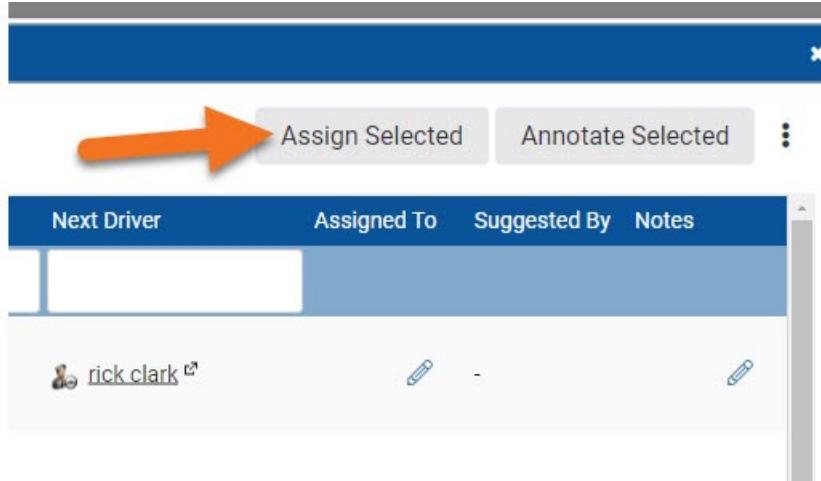

Assign Unidentified Records

Either use the edit pencil in the Assign column to assign any individual record to a driver, or use the first column check boxes to choose multiple records to assign.

The screenshots illustrate the process of selecting multiple records in the Unidentified Record Manager. In the first screenshot, multiple records are selected using checkboxes in the first column. In the second screenshot, a single record is selected using a checkbox in the first column. The third screenshot shows the 'Assign Selected' button at the top right, which is highlighted with an orange arrow, indicating the next step in the process.

Then use the Assign Selected button at the top right to assign all of the selected records to an individual driver.

This screenshot shows the 'Assigned To' section of the interface. It includes columns for 'Next Driver', 'Assigned To', 'Suggested By', and 'Notes'. The 'Assigned To' column contains a list of drivers, with 'rick.clark' highlighted. An orange arrow points to the 'Assign Selected' button at the top right of this section.

Cancel **Save**

Step Two:

Add the Details.

Shipping Document Number: Add the appropriate shipping document number. *Note: all driving records without the proper shipping document number are form & manner violations.*

Carrier: Select your carrier from the list of carriers. If you only have one carrier listed, you must still select the carrier for a CDL driver's log.

Trailer: Select the trailer the driver was pulling at the time of these records. If not pulling a trailer, leave this field as none.

Notes: You must add a note to these records. You cannot assign unidentified records without adding a note.

Save: Click save to complete.

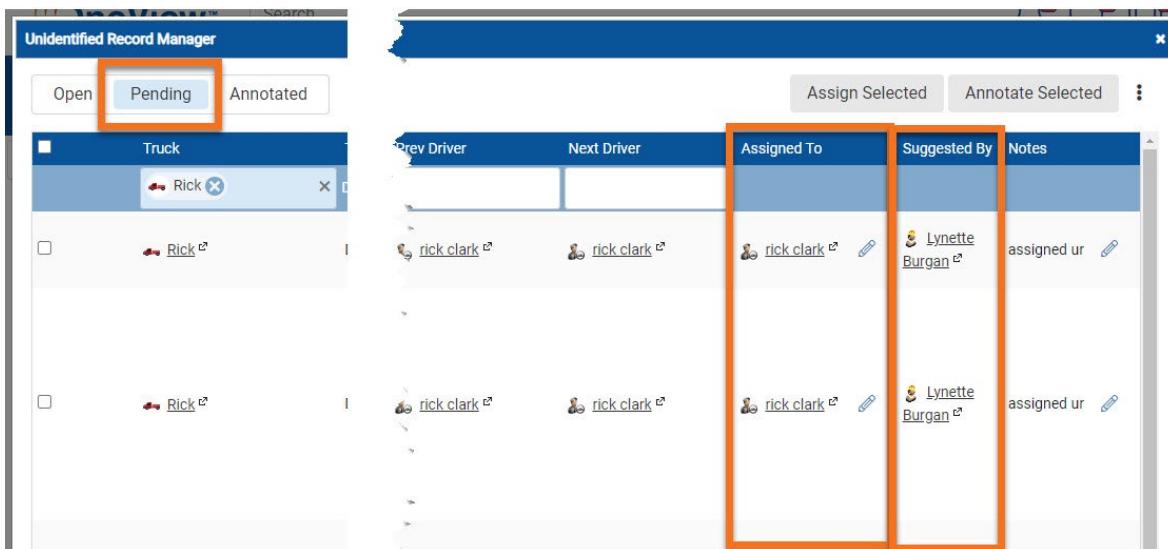

Add Details for Unidentified Records

Pending Unidentified Records

Any unidentified records that have been assigned to a driver will fall into the Pending list. You will see which driver has been assigned each record and who assigned them.

Prev Driver	Next Driver	Assigned To	Suggested By	Notes
	rick.clark	rick.clark	rick.clark	Lynette Burgan assigned ur
	rick.clark	rick.clark	rick.clark	Lynette Burgan assigned ur

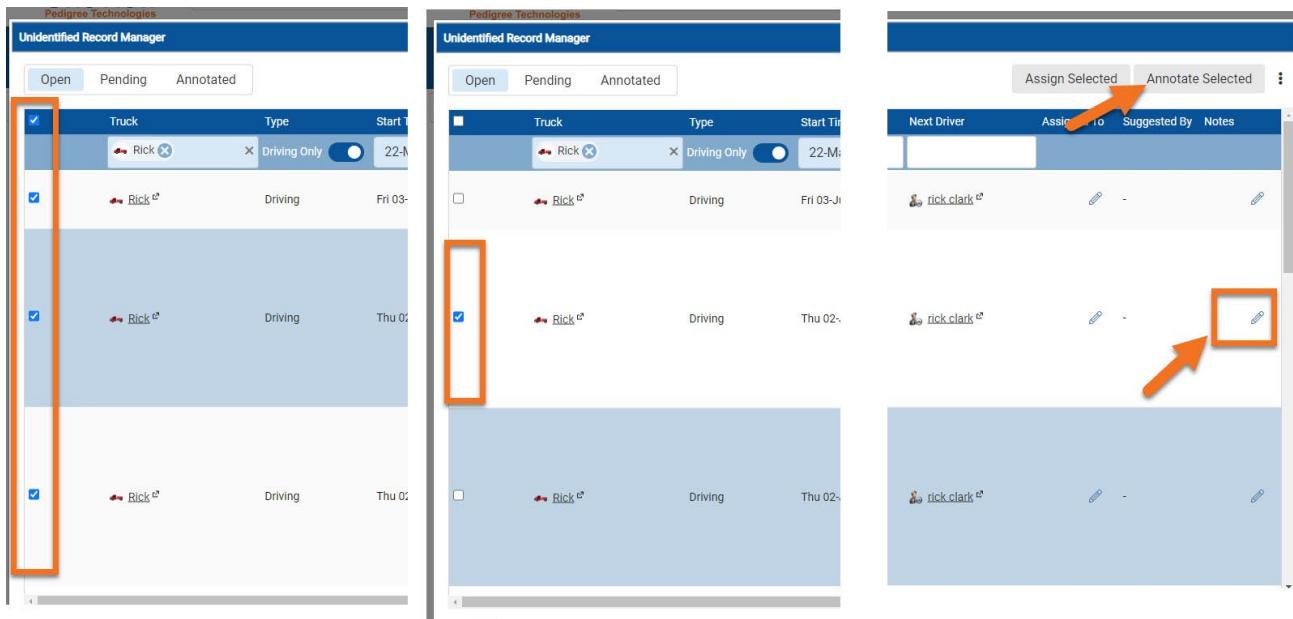

NOTE: To assign any pending record to a different driver, use the edit pencil for an individual record or check multiple records and use the Assigned Selected button as if you are assigning them the first time. Choose a different driver.

Annotate / Add Notes to Unidentified Records

You might add a note to unidentified records that will not be assigned to one of your employees/drivers for various reasons allowed by the ELD mandate.

Step One:

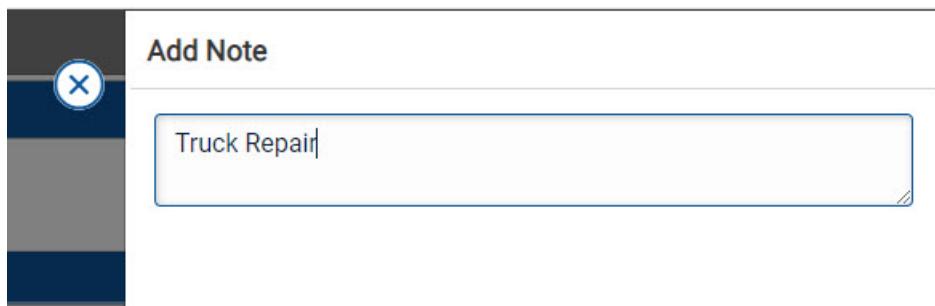

Either use the edit pencil in the Notes column to add a note to any individual record, or use the first column check boxes to choose multiple records to annotate.

Truck	Type	Start Time	Next Driver	Assigned To	Suggested By	Notes
Rick	Driving Only	22-May-2023				
Rick	Driving	Fri 03-Jun				
Rick	Driving	Thu 02-Jun				
Rick	Driving	Thu 02-Jun				

Step Two:

Add a note in the notes box and Save. This note will be added to all of the records you had selected if annotating multiple records.

The records with notes will now move to the Annotated list. Any annotated records can still be assigned if necessary.

Log Records – Assumed from Unidentified

Any log records that are from a driver accepting unidentified records, or from assigning unidentified records to a driver will show Assumed from Unidentified in the origin column. There will also be a green check mark that allows you to see the history of that record.

Date & Time	Event Type	Location	Vehicle	Odometer (mi.)	Engine Hours	Trailer	Shipping #	Notes	Origin	Edits
07:01 PM (CDT)	Off Duty	0 mi. from office, TX	286	11,144	48.2	-	h	Auto Start	Manual
