# OneView
Pedigree Technologies

Prerequisites

Required Information

- Name of asset *(ex: Tank #20)*
- Detailed information about the asset *(year, model, tank volume, etc.)*
- State, area, organization, or group the asset belongs to *(ex: North Region, MN tankers, etc.)*
- S/N of device to be installed *(S/N is found on the side of the box)*

Required Equipment

4-20mA Inventory Manager

Required Tools

Drill and assorted drill bits *(to secure device)*

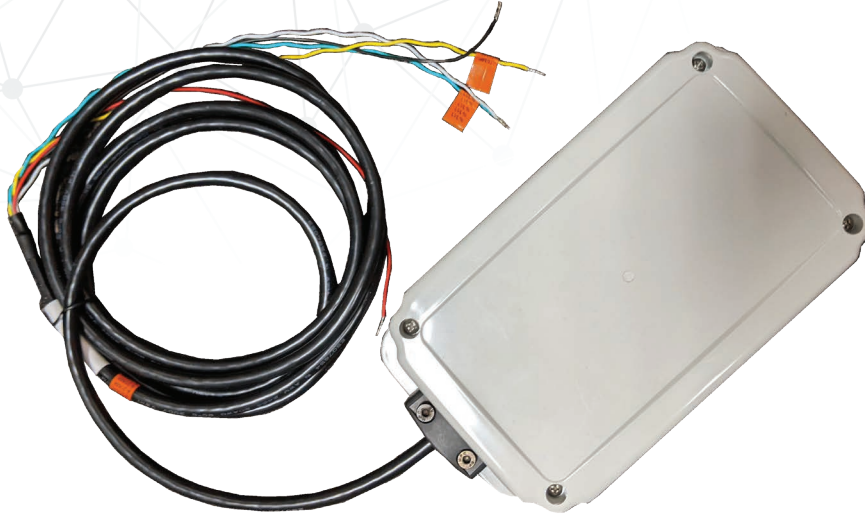

Before You Begin

TURN TO THE LAST PAGE - WRITE DOWN THE REQUIRED INFORMATION!!!

- Decide where the device will be located near the tank and/or temperature sensors.
- Do not paint, pressure wash, or otherwise obstruct the surface of the device.

PedigreeTechnologies.com | Support: (701)-499-0022

Installation

STEP ONE- MOUNT DEVICE
Decide on a mounting location near the tank and/or temperature sensors, within range of the device cabling.

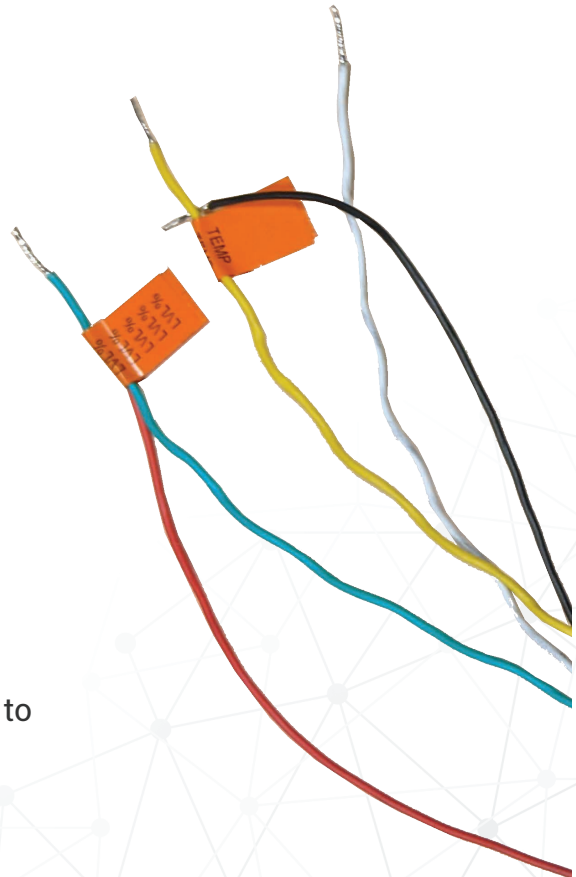

STEP TWO
Connect the red wire to power (9-32VDC)
Connect the black wire to ground

STEP THREE
Connect the green wire (labeled "LVL %") to the
tank sensor 4-20mA output

STEP FOUR
If applicable, connect the yellow wire (labeled "TEMP") to
the **temperature sensor 4-20mA output**

Installation *continued*

STEP FIVE

Record the device serial number from the side of the box. You will need this information when activating the device, along with the asset/tank name and the current tank volumne (and current tank temperature if applicable)..

Testing / Confirmation Steps

STEP SIX

Call Pedigree Technologies installation support to confirm and finalize the installation.

701-499-0022

You will be prompted for the following information during the set up process

- Device S/N
- Name of Asset/Tank (ex. Tank 21)
- Tank current volume
- Tank current temperature
