# OneView™ Magellan Navigation

Magellan New Installation Steps

1. Once the Magellan application has been downloaded, a new Magellan icon will appear on your tablet's home screen.

2. If your tablet already has the appropriate map files pre-loaded, you will be taken to a Welcome screen. From the "Welcome!" screen, select the white triangle in the lower right to continue.

OneView™ Magellan Navigation
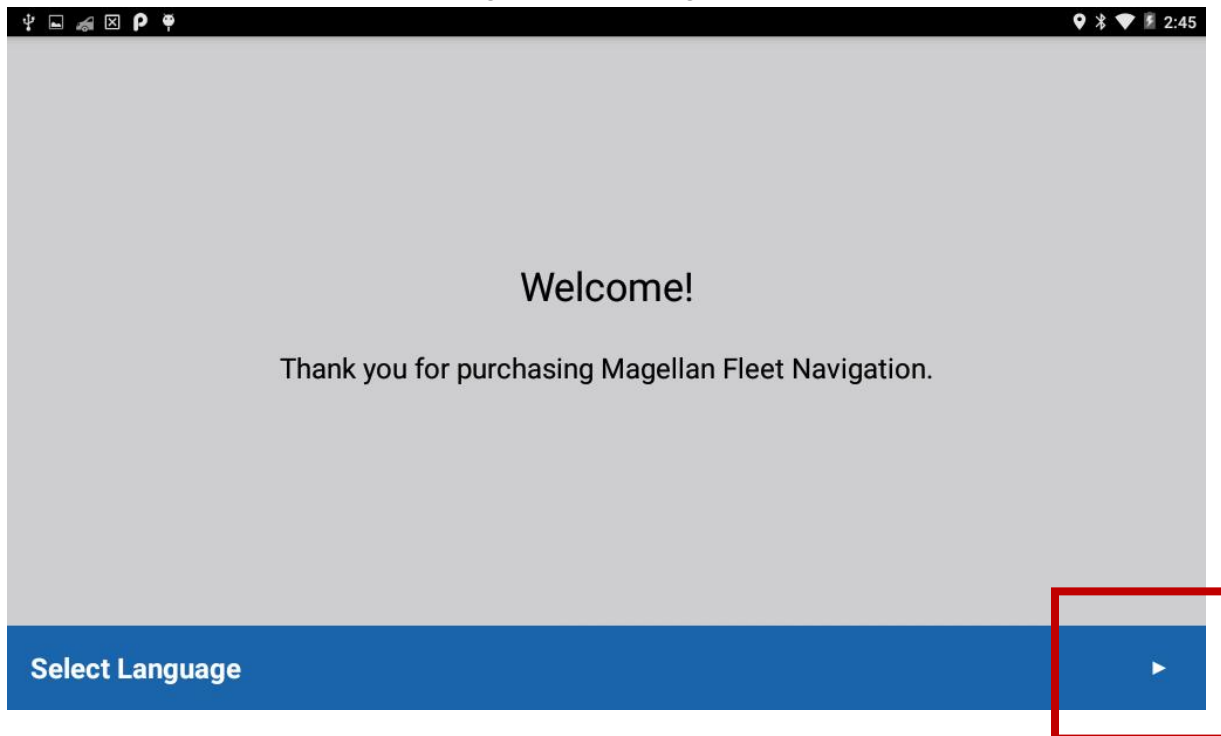

**Note: If the resources were not pre-installed on your device, you will see this download screen. Hit "Start Download." (You must be on a Wi-Fi connection.) When download is complete, you will be taken to the "Welcome Screen." Continue with the set-up process.

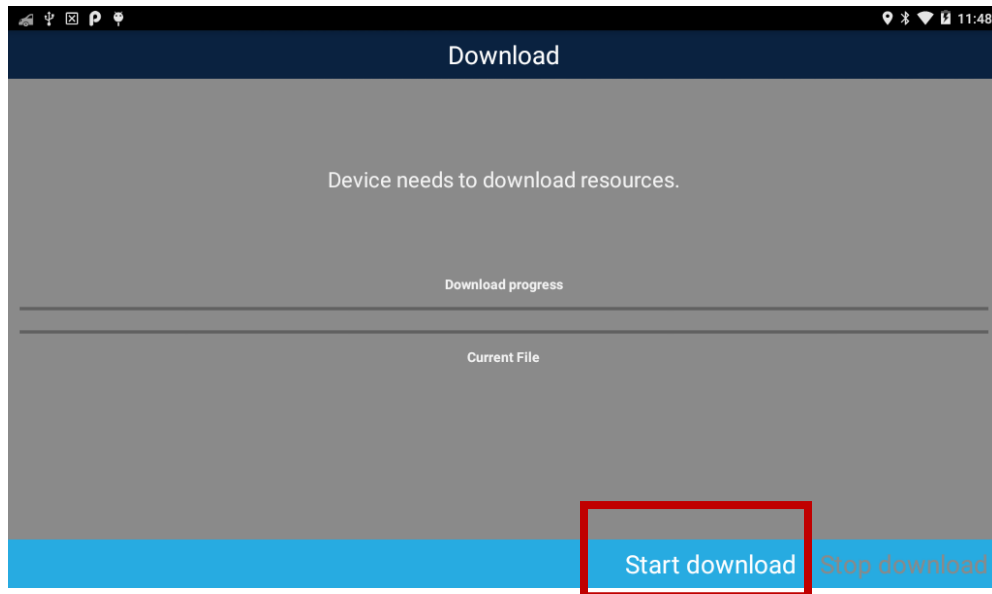

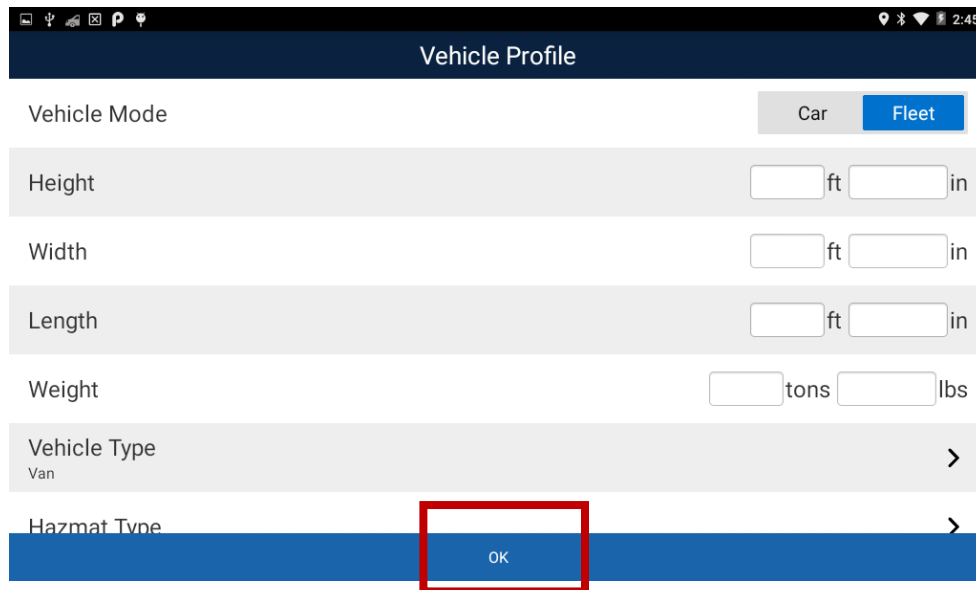

3. Select your language and hit "OK"
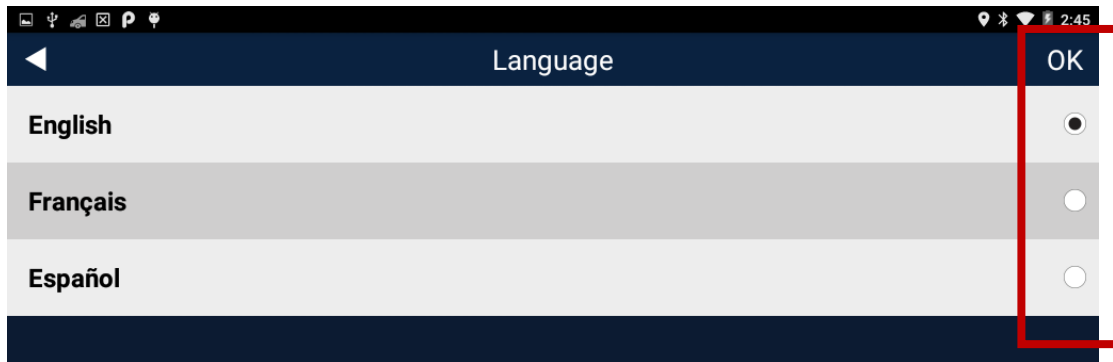

4. Agree to the Magellan EULA by clicking "I've read and agree to the terms"
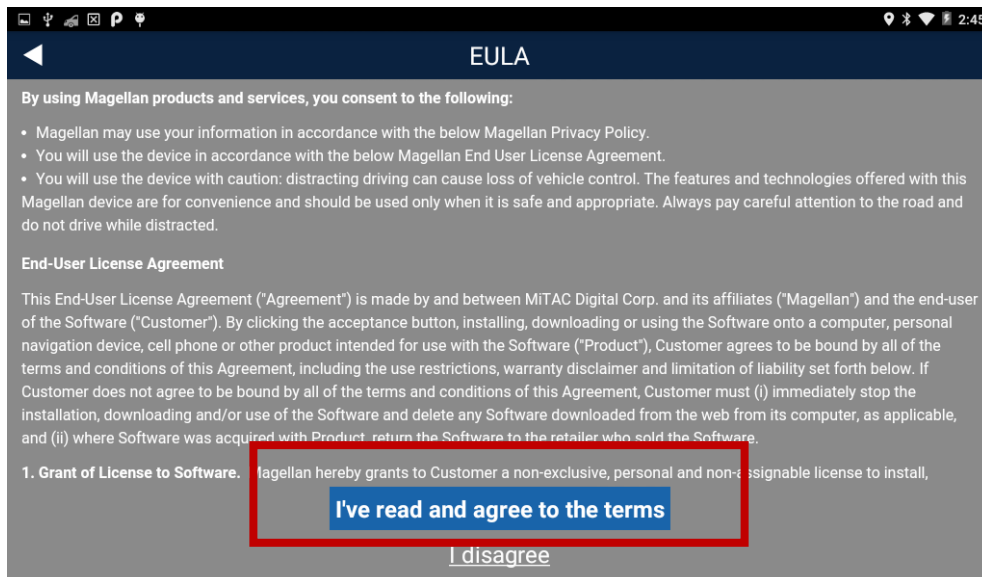

5. Enter vehicle information then select "OK" when done.

6. On Warning Screen select "OK" to continue to Magellan.

7. If you were required to download the Magellan Resources, you will need to download the complete map files before Magellan software can be used. To do this:

    a. Select the gear in the lower right corner.

b. Select "Information"
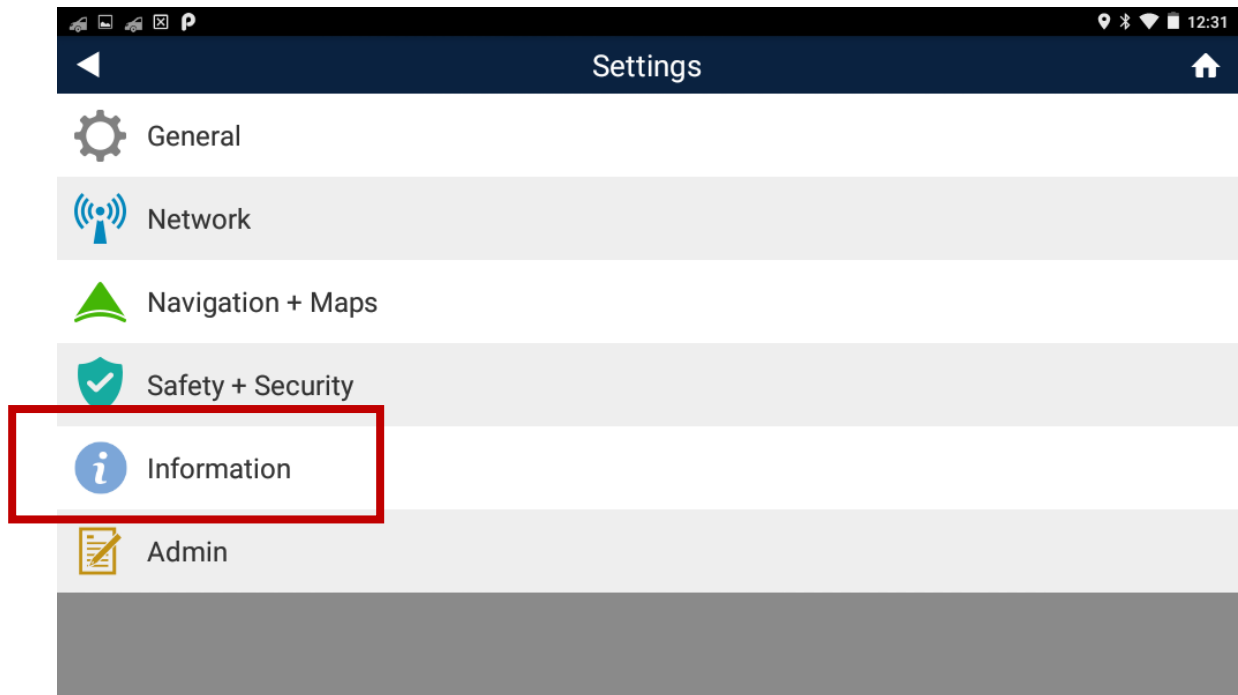

c. Select "Check for Updates"

d. Select "Update" on the Map Update section. It requires at least 20% battery to continue.

e. Select "Continue"

f. Agree to the Magellan EULA by clicking "I've read and agree to the terms"
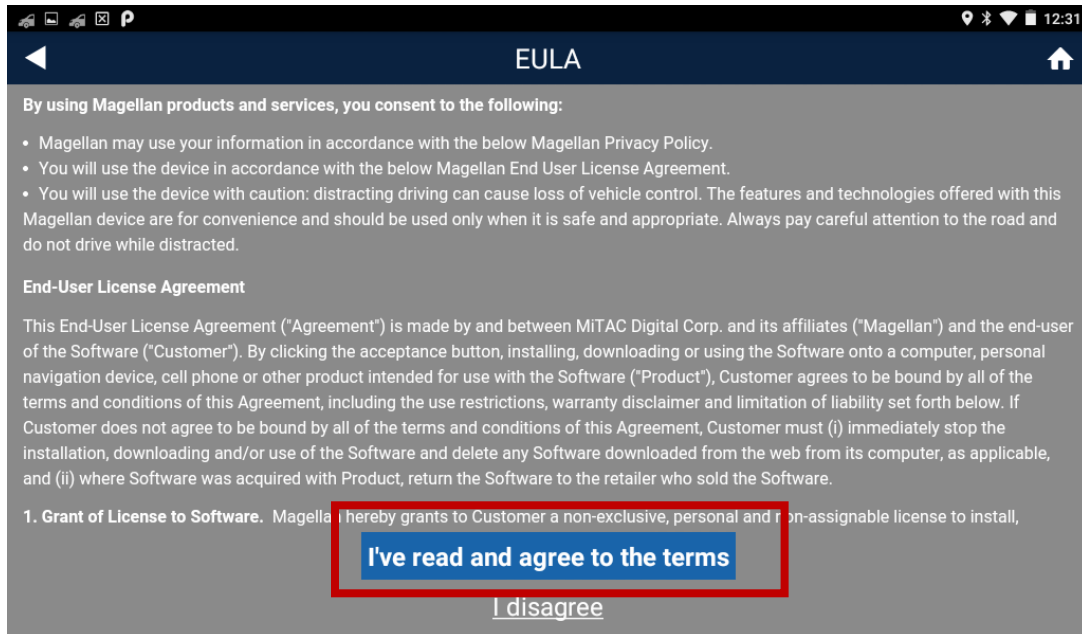

g. Wait for map download to complete. These files are very large and can only be downloaded over Wi-Fi. These may take up to an hour to complete.
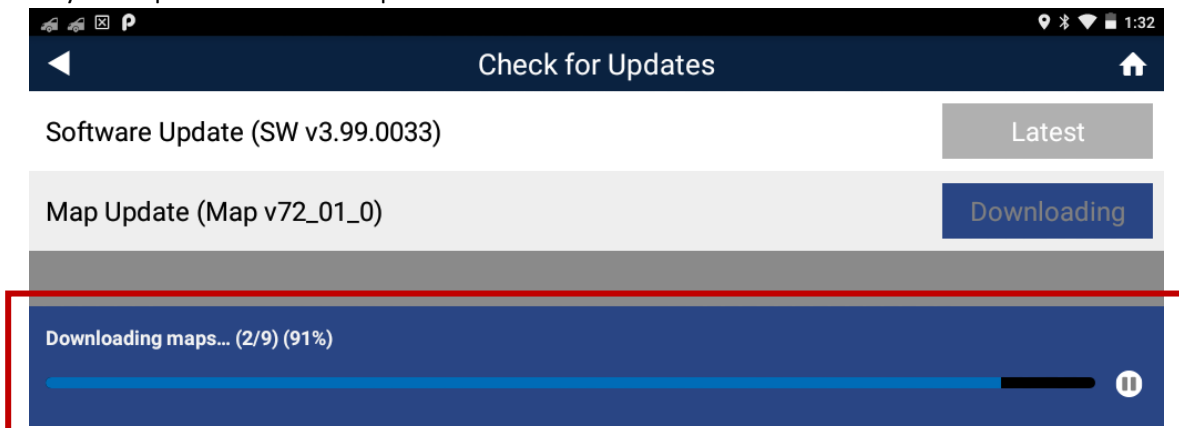

h. Once download is complete, Magellan will automatically verify the files. It will take a few minutes to complete this process.
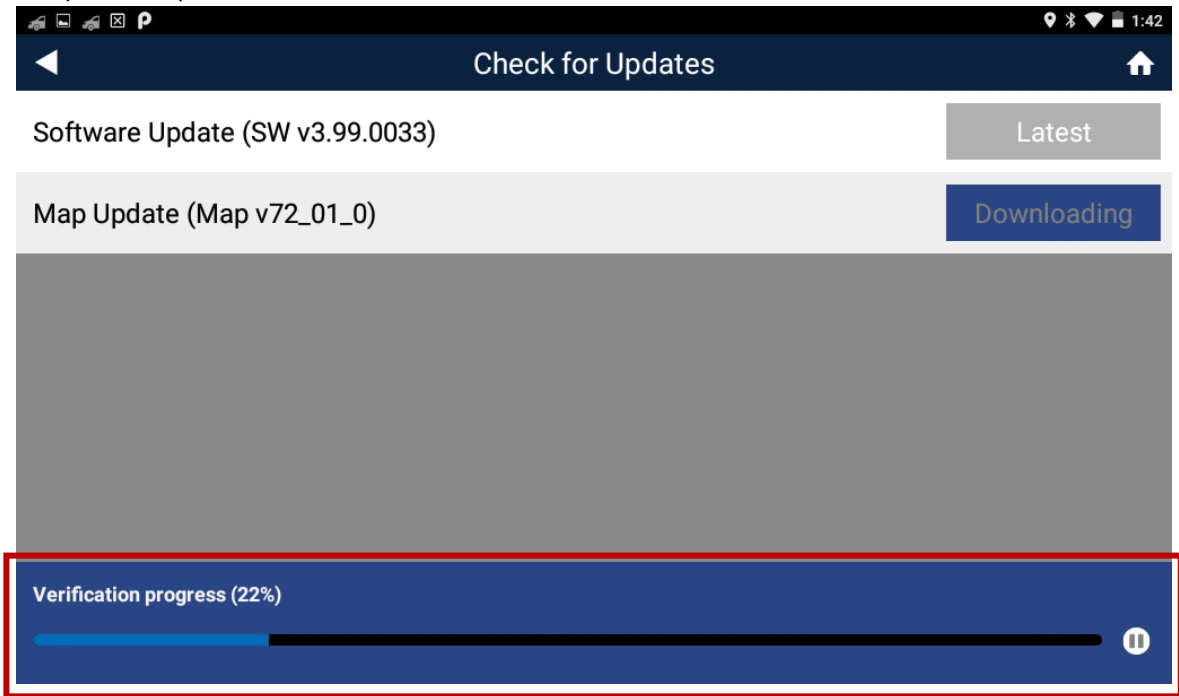

i. After verification Magellan will prompt for a restart, select "OK"
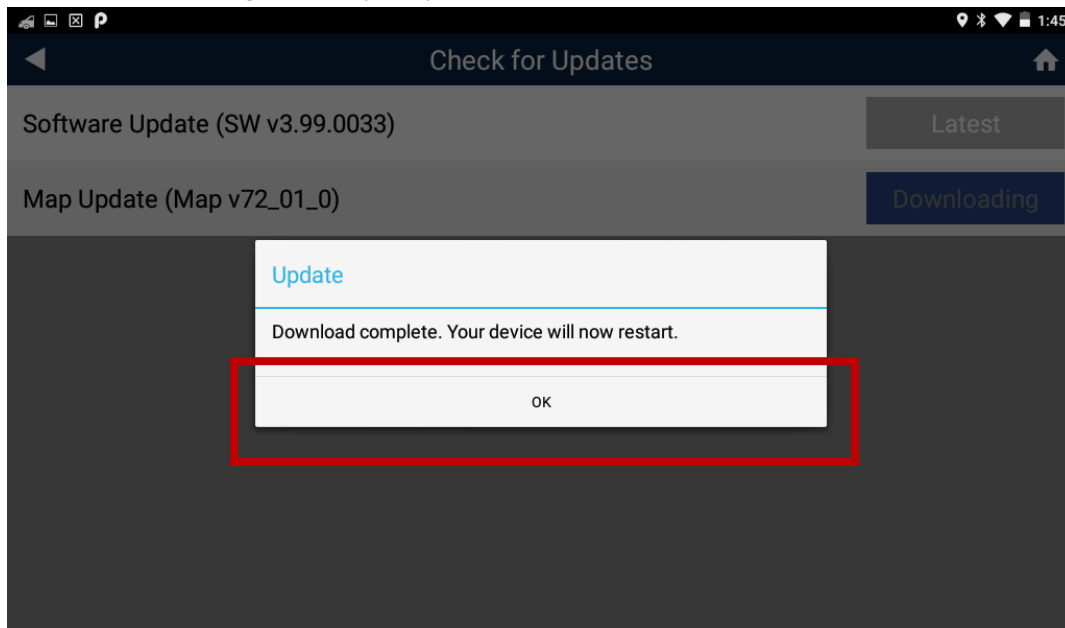

j. You should now be able to relaunch and use your new Magellan software.

Magellan Map Update Steps

Requires: 4GB+ microSD card

When Map Updates are available in the Magellan software, you will see a red exclamation point on the settings button in the lower corner. To download the map files you will need a 4GB+ microSD card. Please note Magellan map files can only be downloaded via Wi-Fi.

NOTE: Once the map files have been downloaded via Wi-Fi to the microSD card it can be used in other tablets which allows skipping the lengthy download process of Step 9. The microSD card can also be left in the tablet to make sure there is enough space to download any new Magellan map files when they become available.

1. Insert microSD Card into the tablet. Micro SD Card slot is located under the rubber flap on the right side of the Tablet, near the top.

2. From the Magellan software home screen, select the gear in the lower right corner.

3. Select "Information"

4. Select "Check for Updates"

5. Select "Update" on the Map Update section, requires at least 20% battery to continue

6. Select "Continue"

7. Agree to the Magellan EULA by clicking "I've read and agree to the terms"
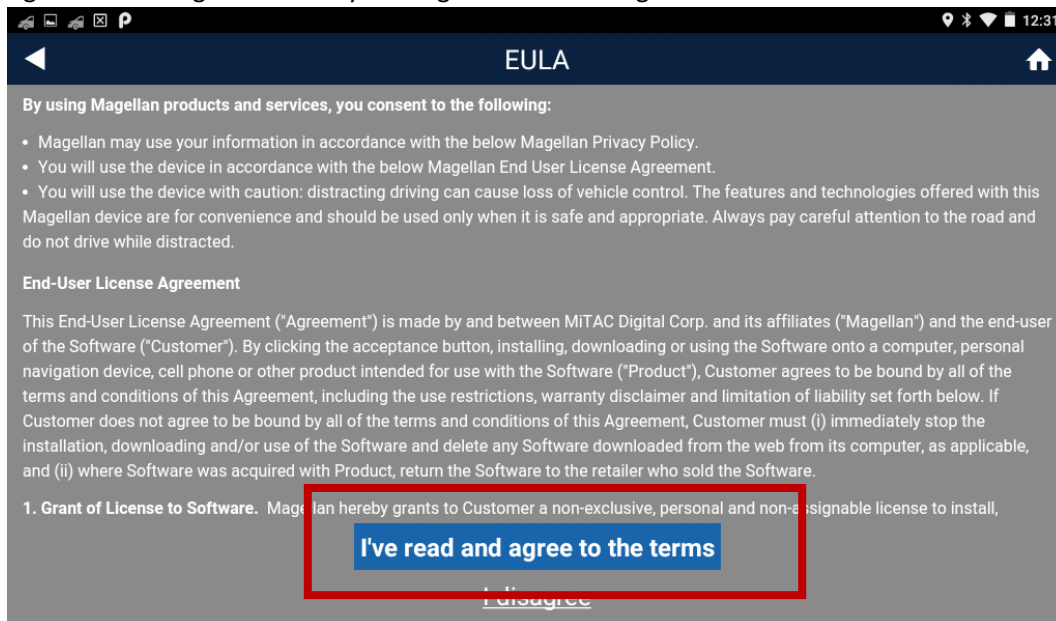

8. Wait for map download to complete. These files are very large and can only be downloaded over Wi-Fi. These may take up to an hour to complete.

9. Once download is complete Magellan will automatically verify the files. This will take a few minutes to complete.

10. Once verification is complete Magellan will automatically copy the files from the SDcard and replace the old Map Files on the Tablet. This will take a few minutes to complete.
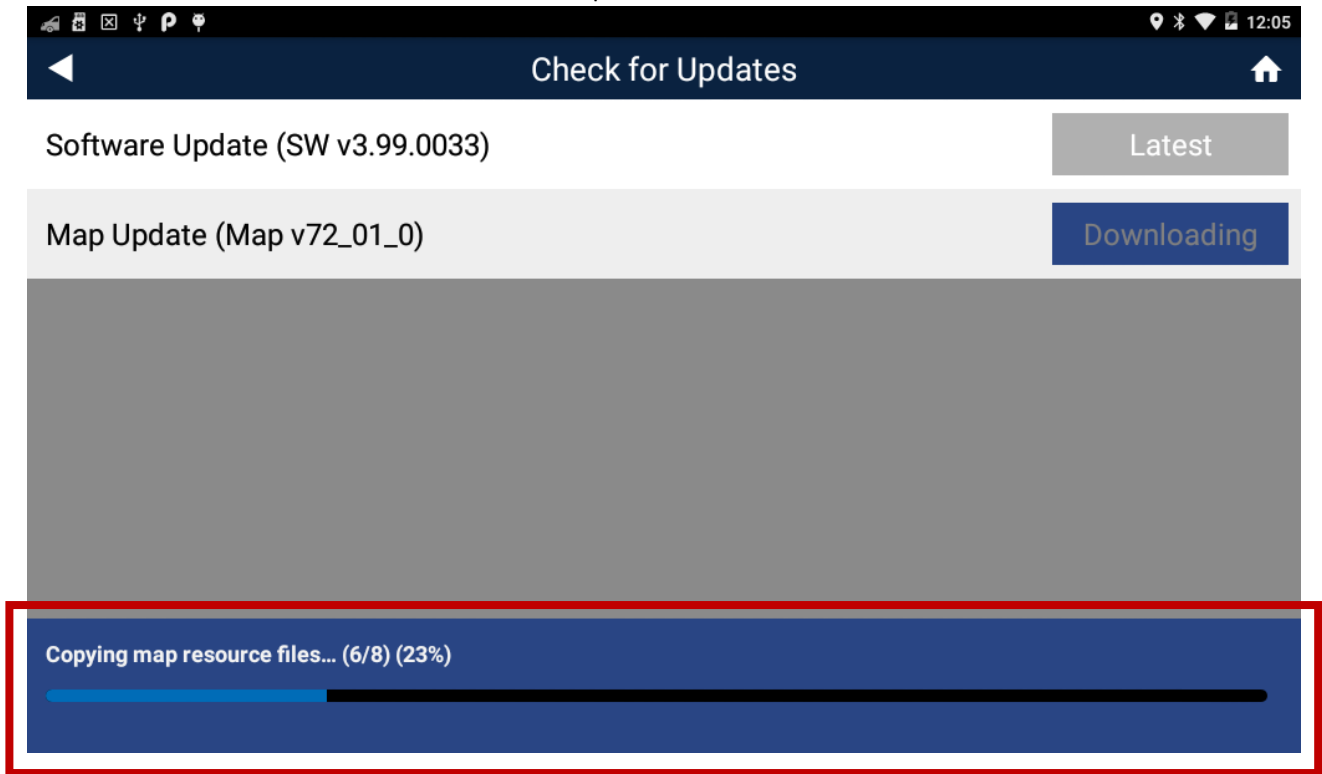

11. After copy has been completed Magellan will prompt for a restart, select "OK"

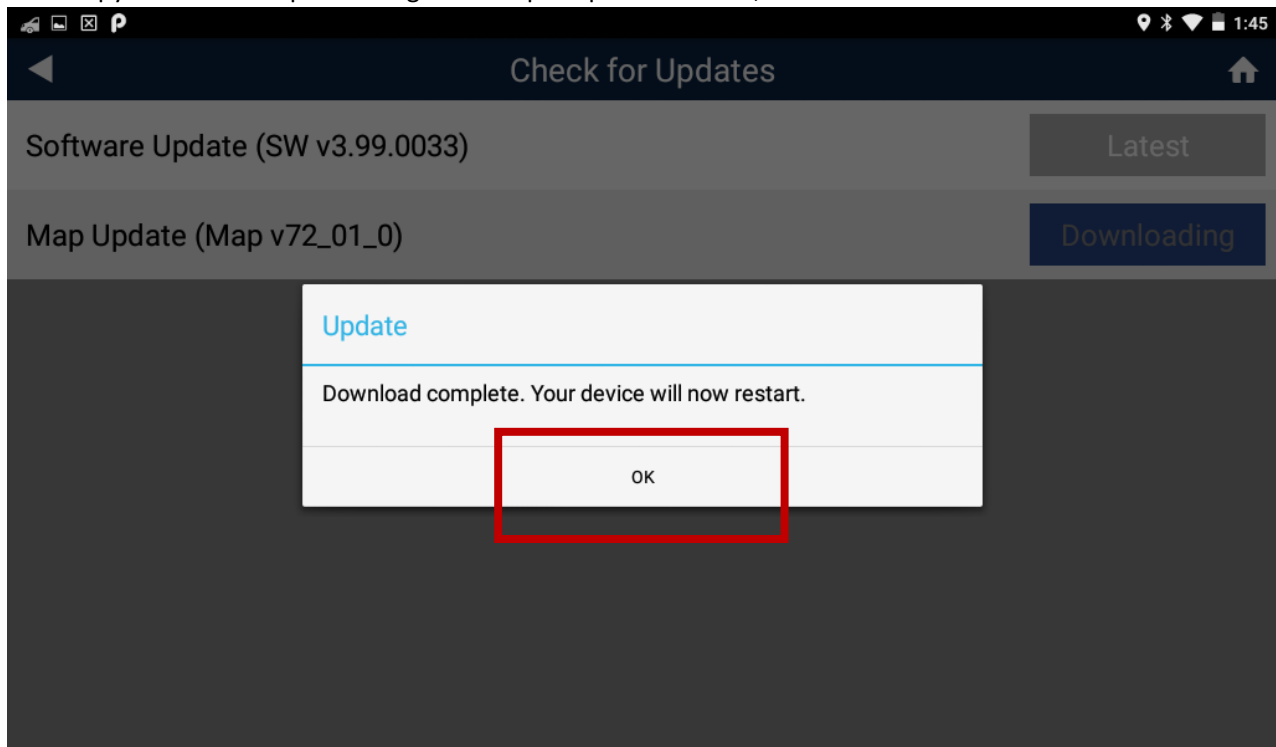

Magellan Map files should now be up to date. The microSD card should now contain the map files and can be used in another tablet. The next setup will automatically skip the lengthy download process of Step 9. The microSD card can also be left in the tablet to make sure there is enough space to download any new Magellan map files when they become available.

Troubleshooting

Battery Too Low to Continue

The Map Update section requires at least 20% battery to continue. Charge your tablet by placing it in the cradle with the engine of the truck running until the tablet is at least at 20% battery.

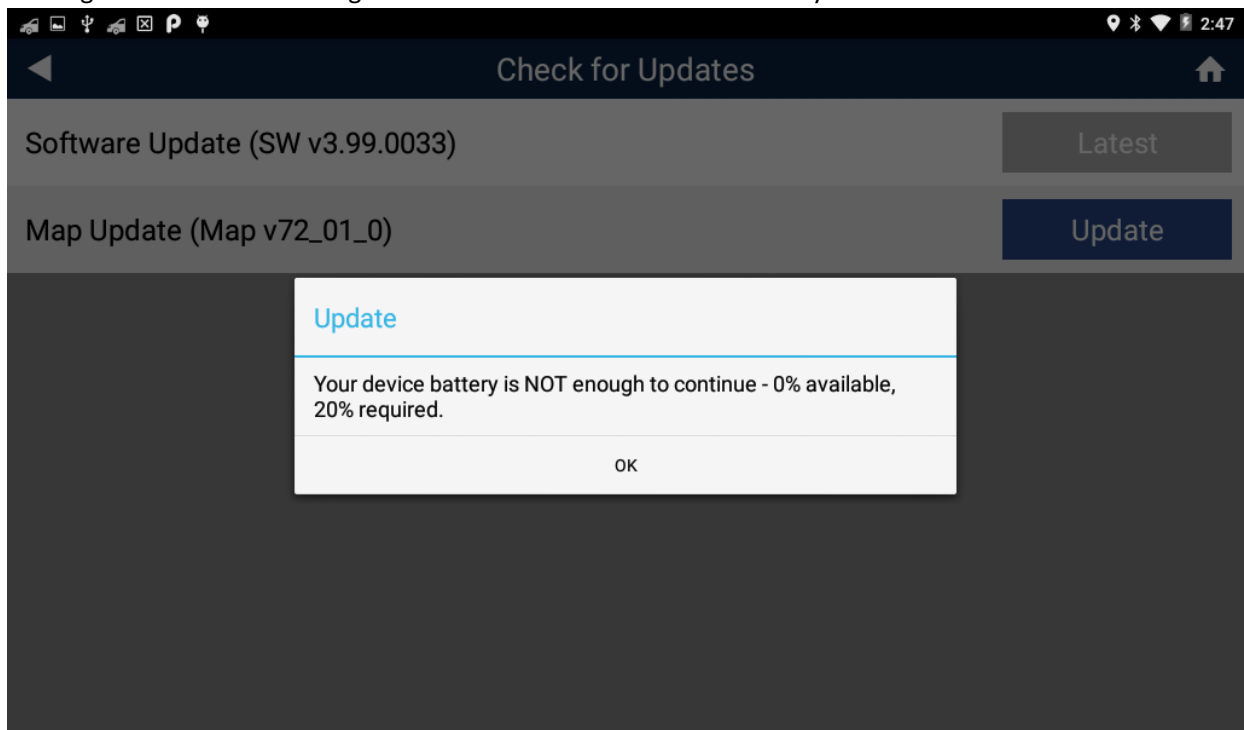

Or use a miniUSB cable *(not included with tablet)* to charge the tablet. The port is located on the bottom side of the tablet.

![OneView Magellan Navigation logo]

Insufficient Storage

If you receive a prompt for "Insufficient Storage" the microSD card was either not inserted or does not have enough space to store the Map files. Map files require at least 2.5GB of free space. Try inserting the microSD card again or find a card with more available space.
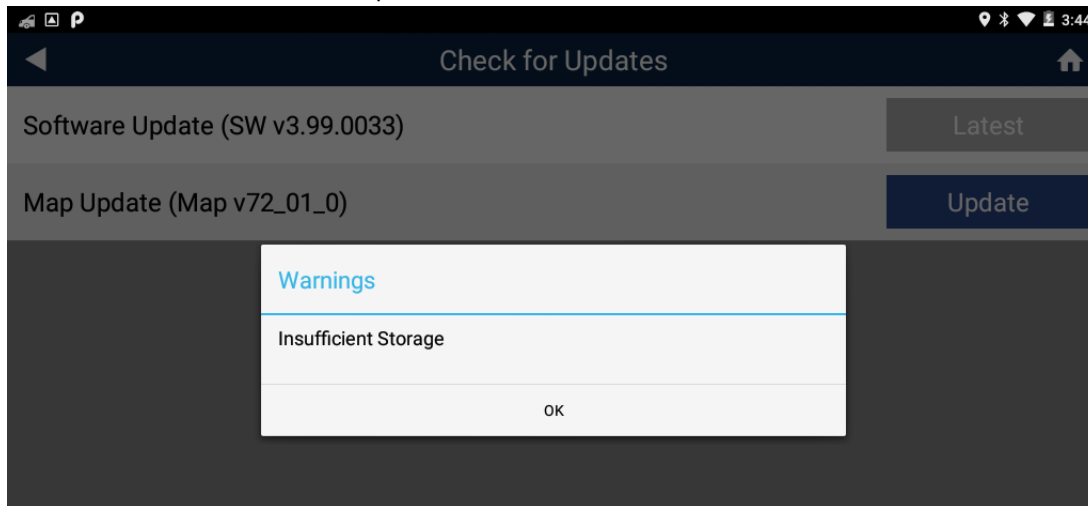

Error Code

During activation and initial setup if you are prompted with any registration/error messages please try closing and re-opening the Magellan software. If the errors continue please contact Pedigree support.
